EQUIPMENT

THE NEW STAR RANGE

Everything's changed
except the name!

More agile, more robust, more reliable
than ever, easier to use and maintain...

The STAR range without jib is the ideal
solution to carry out daily tasks aloft!

STAR 6

NEW **STAR**

EASY SOLUTIONS

6 or 8 meters

STAR 8S

READY > GO!

NEW **STAR**

NO COMPROMISE

To provide maximum efficiency and safety,
STAR is an uncompromising machine, combining:

1

HIGH
PRODUCTIVITY

2

OPTIMAL
AGILITY

3

GUARANTEED
COMFORT

4

EASY
MAINTENANCE

PRODUCTIVITY

HIGH **PRODUCTIVITY**
to work efficiently and quickly.

DESIGNED FOR INDOOR OR OUTDOOR USE

STAR 6 is versatile, designed for indoor or outdoor use on hard surfaces.

STAR 6 can hold up to two operators indoors and one operator outdoors, for maximum efficiency.

FORWARD SPEED OF 4.5 KM/H

With its forward speed of 4.5 km/h, STAR moves quickly to insure optimal productivity.

TIME TO FULL HEIGHT IN ONLY 14 SECONDS

STAR reaches its maximum market-leading working height in only 14 seconds.

DEEP-CYCLE BATTERIES

Equipped with deep-cycle batteries, you'll be able to accomplish your daily tasks with the STAR all day long, without worrying about weak batteries.

BATTERY INDICATOR

Thanks to the battery indicator located in the upper control box, you'll never be caught unawares. Everything is under control.

AGILITY

OPTIMAL AGILITY IN HARD-TO-REACH PLACES

to maneuver and work efficiently and quickly, while ensuring operator safety.

AC MOTORISATION

AC MOTOR TECHNOLOGY: PRECISION AT YOUR FINGERTIPS

Combining high torque with precise and smooth control, AC motors provide unmatched precision and comfort to get to hard-to-reach areas. Thus, operators work with confidence and efficiency.

OPTIMAL WEIGHT FOR INTENSIVE USE

Thanks to its optimized weight, it allows the STAR to:

- > enter a freight elevator without concerns to access on upper or lower floors;

- > Work in low floor bearing capacity areas;

- > The **STAR 6** can cover your worksites indoors... and outdoors, in winds up to 45 km/h while maintaining its load capacity of 230 kg.

45 km/h

230 kg

AGILE AND COMPACT

With its narrow turning radius, operators can maneuver in the most restricted spaces.

In addition, as it is very compact, it gets in and out of the most confined areas, even going through standard 80cm wide doorways.

CLEVER TRANSPORT

For maximum flexibility, STAR can be lifted lengthwise or widthwise during transport phases. Indeed, the chassis incorporates specially designed forklift tine pockets. With this simple and efficient solution, the machine can be lifted safely without any risk of tipping over.

AUTOMATIC PROTECTION SYSTEM AGAINST POTHOLE

Thanks to this equipment, STAR can get over numerous obstacles along the industrial and commercial buildings and has no trouble making it up truck ramps during the transport phase.

STAR 6 **AC**

COMFORT

GUARANTEED COMFORT

to work efficiently and confidently.

SMOOTH PROPORTIONAL MOVEMENTS

Smooth elevating and driving functions, STAR adds to the operators' on-the-job comfort and confidence.

STABLE PLATFORM

While raising and lowering the mast, rigidity is provided by the architecture of reversed caissons. This offers more stability to let you operate with confidence!

ERGONOMICAL AND FUNCTIONAL CONTROL PANEL

To move around accurately in tight and confined spaces, STAR features a new upper control box*. Thanks to its joystick, control and maneuvering aloft are intuitive, secure and precise.

BASKET EXTENSION

STAR is available with a basket extension allowing additional space and a further reach of 40cm.

SECURE ACCESS

Non-skid step integrated into the machine's design allowing a sure-footed entry in the platform.

* Common control panel with electric scissor Optimum 8

MAINTENANCE

MAINTENANCE CLOSE TO ZERO

to optimize downtime costs.

ON-BOARD DIAGNOSTIC TOOL HAULOTTE ACTIV'SCREEN: MAINTENANCE AT HAND

Very easy to use, it provides operators and technicians with key information such as alarms for slope, etc., troubleshooting, as well as battery charge and maintenance alerts. Operators or rental companies thus remain perfectly autonomous. Haulotte ACTIV'Screen also lets technicians use their access code to program and calibrate the machine, as well as diagnose malfunctions.

For maximum clarity, information is displayed in full text and available in more than 10 languages. Haulotte Diag App enables a wireless access with advanced diagnostic features, through your mobile phone or the Diag Pad.

NO ROPES, NO CHAINS

The reverse caissons of the mast has no ropes or chains, promising a reduced need for maintenance.

AC MOTORS : MEAN MINIMAL MAINTENANCE

Renowned for their reliability and robustness, asynchronous motors require no regular maintenance since there are no carbon brushes to be replaced. Also, since asynchronous AC motors take up less space, maintenance operations (if needed) are simpler and easier to carry out.

QUICK MAINTENANCE

On the STAR, all has been predicted to ensure quick interventions:

- > The 2 pivoting tables for the batteries open easily;

- > There is a quick-open inspection hatch allowing easy access to the hydraulic block;

- > Other major maintenance and control points, such as tilt sensor, are directly accessible.

PARTS DURABILITY

To ensure optimum resistance to corrosion, all STAR pins, bushes and metal parts have been specially treated to resist the test of time to optimize your costs of ownership. Similarly, waterproof connectors protect electrical circuits from moisture, corrosion and resulting breakdowns.

NEW STAR

A MULTIPURPOSE MACHINE THAT SUITS MANY TYPES OF APPLICATION

REPAIR OR INSTALLATION JOBS

(administrative buildings, shopping centers, airports, museums, train stations, hospitals, etc.)

MAINTENANCE AND INDUSTRIAL CLEANING

INDOOR FINISHINGS

(electrical, lighting, plumbing, painting, HVAC, fire detection systems, etc.)

OUTDOOR MAINTENANCE AND WORK

(lighting, signage, repairs, etc.)

LOGISTICS AND DISTRIBUTION

(stock picking, warehousing, inventories, decoration, etc.)

NEW STAR

THE MAIN AVAILABLE OPTIONS TO RESPOND TO YOUR NEEDS
